

Ninja Shadow Warrior Cabinet: Technical Drawing 5/14/12

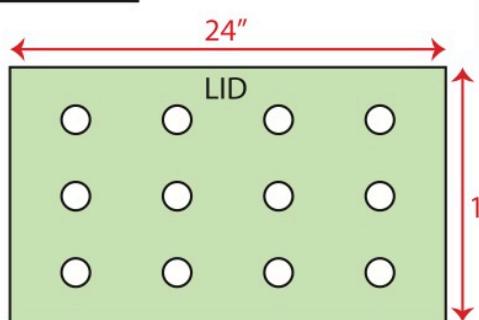

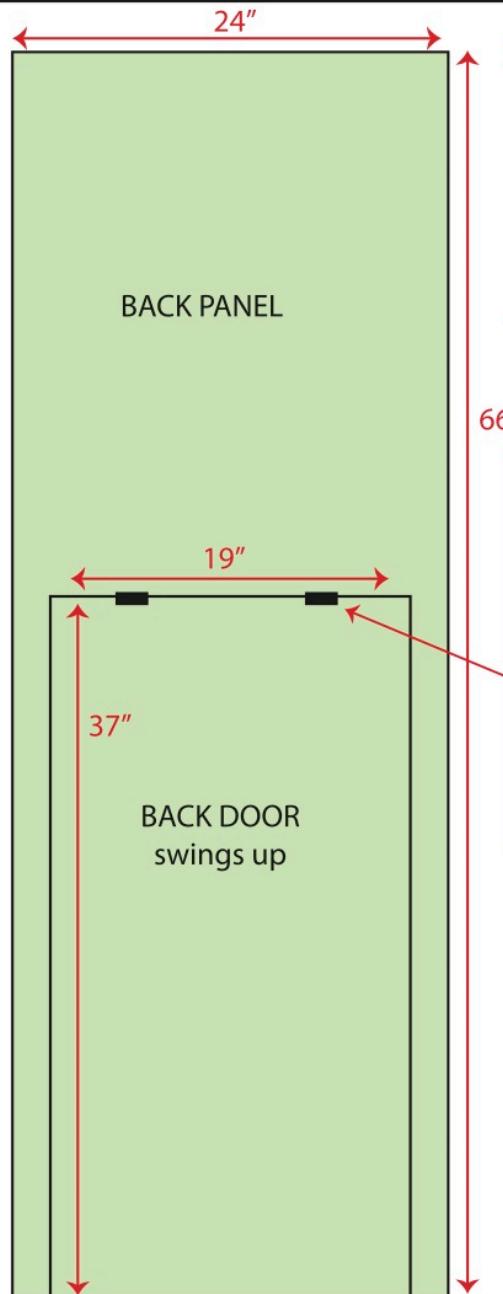

Kaho Abe

Please use 3/4" thick wood.
The original cabinet is
made with 1/2" wood and
the sides were too thin to
screw things on. The mea-
surements have been ad-
justed already in the
sketch to accomodate 3/4"
wood.

The Lid is placed inside the top of the cabinet. There should be supports in the inside corners to hold it up.

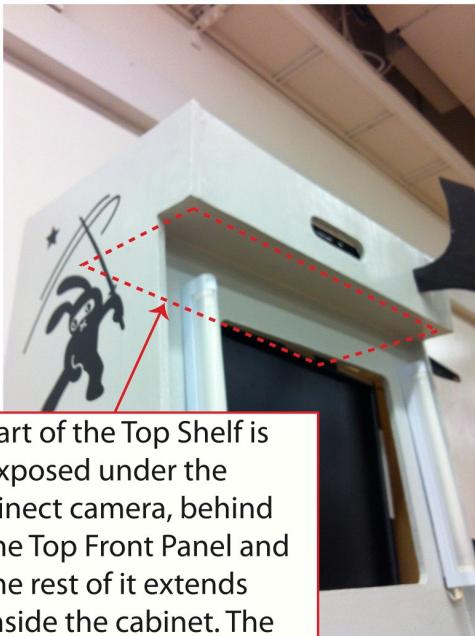

There should be locks on the Back Door and Lid for security.

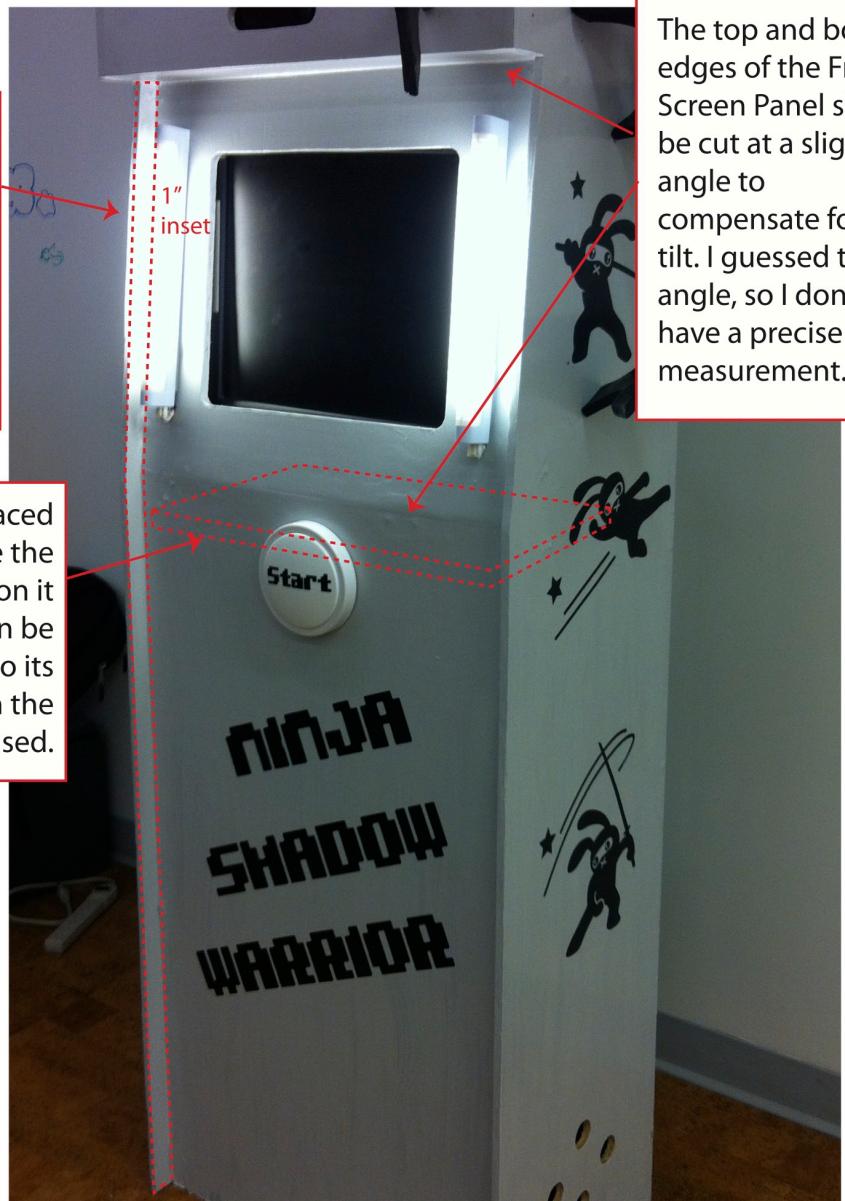

Florescent lights and holes for light cord depends on the size of lights you can find. The ones on the cabinet are 13.5" long 7/8" wide. They are centered on the right and left sides of the monitor opening.

The front and back panels sandwiched between the side panels. The Front Screen Panel and the Front Bottom Panel are inset 1" from the edge of the side panels, beginning at the Top Shelf all the way to the floor.

There are 1.5" diameter holes in the Lid and the Side Panels to allow for ventilation. More holes can be added, if you think there needs to be more ventilation.
